INTRODUCTION
Siddha medicine is a form of south Indian Tamil traditional medicine. This system of medicine was popular in ancient India. The system is believed to be developed by the Siddhars, the ancient supernatural spiritual saints of India and the Siddha system is believed to be handed over to the Siddhar by the Hindu God-Lord Shiva and Goddess Parvathi. Siddhars Total Numbers are eighteen in them Agathiyar is the First Siddhar. The Siddhars wrote their knowledge in palm leaf manuscripts, fragments of which were found in different parts of South India.

MATERIALS AND METHODS

ABSTRACT
Siddha medicine presently practiced predominantly in South India. In practice, generally the plants used are often in the compound from to which either herbs, metals, minerals and animals products are added. The main aim of the present study is to standardize Linga Chenduram, a nano sized formulation and also to characterize the same by using Sophisticated techniques like FTIR(Fourier Transform Infra –Red) and X-ray diffraction (XRD).

KEYWORDS: Linga Chenduram (Lc), FTIR, XRD.
In the present study, Herbo Metallic preparation Linga Chenduram has been selected to establish its standardization status from the classical siddha literature ("Anupoga Vaithya Navaneetham vol IV" Hakim Pa. Mu. Abdullah Saibu. Page No:51). The ingredients of linga chenduram are four in number. They are purified of lingam, Thirugukallipal, Utthamanipoo and Vellaierukampo.

Details regarding FT-IR (Fourier Transform Infra – Red) analysis
FT-IR spectra were recorded at SAIF, IIT Madras, India. The Perkine Elmer Spectrum one Fourier transform (FTIR) Spectrometer was used to derive the FT IR Spectra of Linga Chenduram in potassium bromide (KBR) matrix with scan rate of 5scan per minute at the resolution 4cm-1 in the wave number region 450-4000cm-1. The samples were grounded to fine powder using agate motor and pestle and the mixed with KBR. They were then pelletized by applying pressure to prepare the specimen (the size of specimen about 13 mm diameter and 0.3 mm in thickness) to recorded the FT-IR Spectra under standard conditions. FT-IR Spectra were used to determine the presence of the functional groups and bands in the Linga chenduram. The recorded spectrum shows in figure.

Details regarding XRD analysis
The XRD studies was done in IIT Madras by using Bruker discover D8 X ray diffractometer.

RESULTS

RESULT

In the FT-IR analysis this Linga Chenduram sample exhibits the peak value shows in table at the wave number of 3419, 3003, 2923, 2855, 1744, 1519, 1376, 1168, 714 having N-H Stretch, O-H stretch, C-H stretch, C=O stretch, C-F stretch, S=O stretch. This indicates the presence of same organic functional groups such as Amines, Carboxylic Acid, Alkanes, Esters, Alkyl Halides, Sulfones.
XRD Analysis For Linga Chenduram
Result of XRD

![XRD Chart]

The obtained XRD clearly indicates that the given sample Linga Chenduram Crystallic nature.

CONCLUSION
The effect of Linga Chenduram in FT-IR analysis confirms the presence of functional groups such as Amines, Carboxylic Acid, Alkanes, Esters, Alkyl Halides, Sulfones is shown on table 1 & chart 1.

The effect of Linga Chenduram in XRD analysis confirms that the drug is crystalline in nature is shown on chart 2. Hence it ensured the efficacy of Linga Chenduram established the fingerprint for standardization of the effective metal formulation.

ACKNOWLEDGEMENTS
The authors wish to thank The Vice Chancellor, The Tamilnadu Dr. MGR Medical University, Gunidy, Chennai and to Indian Medicine And Homeopathy Department Arumbakkam, Chennai and specially thank to Principal, Government Siddha Medical college Palayamkottai.

Finally, I would like to thank my parents (Late)Dr. A.M. Raj H.M.P, R.JeyaMary and My friend P. Suganciya B. E, My brother R. Antony Amalraj B. Sc for their understandings and supports towards me for completing this report.
