ABSTRACT
A novel series of 1-phenyl-3-[4-(5-substituted-2,4-dithiobiureto)phenyl]-prop-2-ene-1-ones(IIIa-e) was synthesized by the interactions of 1-phenyl-3-(4-thiocarbamidophenyl)prop-2-ene-1-one (I) with different isothiocyanates(IIa-e) in acetone medium. The structure justification of synthesized compounds was done on the basis of elemental analysis, chemical characteristics and spectral studies.

KEYWORD: 1-phenyl-3-[4-(5-substituted-2,4-dithiobiureto)phenyl]-prop-2-ene-1-ones(IIIa-e)

INTRODUCTION
In pharmaceutical, agricultural[1-3] field have crucial role of heterocycles and heterocyclic compounds containingthio carbamido, thiaburato, dithiazine, dithiobiureto and thioamido nucleus and also have their own identity. The therapeutic value of that drug enhance the potency due to presence of thiocarbamido, thiaburato, dithiazine, dithiobiureto and thioamidophenyl containing compounds. The various 5,6 and 7 membered nitrogen, nitrogen and sulphur containing heterocycles compounds reported by Pandey[4], Berad[5]. Deohate[6,7,1,2,4-dithiazoles, 1,3,5-dithiazines, 1,3,5-thiadiazines acts as drugs and its shows tremendous value of various medicinal, industrial, agricultural, biochemical applications fields. These types of compound possess most fabulous properties like anti-tumor and anti-cancer.[7,9] Also antitubercular, antibacterial, antifungal, antiviral and anti-inflammatory activities,[10-12] showed heterocyclic compounds containing thiocarbamidophenyl. These compounds have wide range of application such as medicinal, biological, agricultural, and industrial and biochemical sciences.[13-15] As per literature survey we design potent series of 1-phenyl-3-[4-(5-substituted-2,4-dithiobiureto)-phenyl]-prop-2-ene-1-ones (IIIa-e).

MATERIALS & METHOD
Materials
AlIthe chemical used in the present research were MERCKS (India Made). Starting compounds (I) were synthesized by literature method.[13]

Method
Method adopted for the synthesis of all the compounds in the present investigation was conventional refluxing under water bath to attain constant temperature. Melting points of all the synthesized compounds estimated using paraffin oil and uncorrected. The carbon, hydrogen and nitrogen analysis was carried out on Carlo-Ebra-1106 analyzer and Colman-N-analyzer-29 respectively. IR spectra were recorded on SCIMADZU FTIR spectrometer in the range 4000-400 cm-1 in KBr pellets. PMR spectra were recorded on BRUKER AVANCE II 400 NMR spectrometer with TMS as an internal standard using CDCl3 and DMSO-d6 as a solvent.

EXPERIMENTAL
General Procedure
1-phenyl-3-[4-(5-substituted-2,4-dithiobiureto)-phenyl]-prop-2-ene-1-ones(IIIa-e) was synthesized by the interactions of 1-phenyl-3-(4-thiocarbamidophenyl)prop-2-ene-1-one (I) with different isothiocyanates(IIa-e) in acetone medium reflux for four hours. During heating reactant dissolved into the solvent. After distillation of excess solvent yellow crystals were obtained, which recrystalized from glacial acetic acid to obtain1-phenyl-3-[4-(5-substituted-2,4-dithiobiureto)-phenyl]-prop-2-ene-1-ones (IIIa-e).
The tentative reaction is given below,
